Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,
lower risk

Typically higher rewards,
higher risk

- This Fund is ranked at 5 because funds of this type have experienced medium to high rises and falls in value in the past.
- By focusing its investments in the UK, the Fund will have greater exposure to the market, political and economic risks of that country than if it was more diversified across a number of countries.
- For further risk information please refer to the prospectus.
