Objectives and investment policy

The Fund aims to achieve a combination of income distributions of approximately 2% per annum and capital growth in excess of the IA Mixed Investment 40-85% Shares index.

The Fund invests primarily in a portfolio of other investment funds. These funds, in turn, invest in UK and other key international markets, including the United States, Europe and Japan. Any Income attributed to Accumulation Shares will be automatically transferred to the capital assets of the Fund. This will then be reflected in the price of each Accumulation Share.

You can buy and sell shares on any working day in England.

Recommendation: this Fund may not be appropriate for investors who plan to withdraw their money within 5 years.

For full investment objectives and policy details please refer to the prospectus.

Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,
lower risk

Typically higher rewards,
higher risk

- This Fund is ranked at 4 because funds of this type have experienced average rises and falls in value in the past.
- This Fund invests into other funds which themselves invest in assets such as bonds, company shares, cash and currencies. The objectives and risk profiles of these underlying funds may not be fully in line with those of this Fund.
- For funds investing globally, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment.
- Bonds may be affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. If interest rates rise, the fixed income earned from bonds becomes less attractive to investors, so the demand for bonds may fall and their capital value may decrease. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may have difficulty in paying their debts.
- For further risk information please refer to the prospectus.
