Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Typically lower rewards,
lower risk

Typically higher rewards,
higher risk

- Please note that even the lowest risk class can lose you money and that extreme adverse market circumstances can mean you suffer severe losses in all cases.
- The Fund is classified in the category above because it invests in company shares which generally provide higher rewards and higher risks than other investments such as bonds or cash. Where no share price history is available for any part of the last five years (and thus no returns), the returns of the Fund's comparative index are used in its place to calculate the Risk and Reward Indicator.
- The indicator does not take into account the following relevant material risks:
 - Investment markets can go down as well as up and market conditions can change rapidly. The value of an investment in the Fund, and any income from it, can fall as well as rise and you may not get back the amount invested.
 - The Fund's exposure to a single market may increase share price movements.
 - The Fund's concentrated portfolio relative to similar funds may result in large movements in the share price in the short term.
